

Stationary Bike Retailers

The following list is not comprehensive nor do we endorse any particular brand or company. This is meant to be an aide in your search for the appropriate bike. Many of our patients prefer the recumbent style bike (this is the type where you sit down against a back rest with your legs in front of you). It seems to be easier to get in and out of after surgery. The important part is that the seat can be adjusted with ease and that you can set resistance. Digital screens and mileage counters are not needed.
